Touch Screen Labelling Solution

01536 414 222
sales@amlabels.co.uk

The AM Labels stand-alone touchscreen labelling system is an intuitive, user-friendly solution designed to make printing labels easier for a range of packaging environments.

Designed for business flexibility, AM Labels standalone solution can either access a remote or a local product database.

With a selection of user friendly features, including a colour coded selection process, a search function with onscreen keyboard or by simply scrolling through products, selecting the labels you require could not be simpler.

Aimed at increasing business efficiency, the solution has proved to reduce label waste with its distinctive product selection process, and ensures that minimal training will be required to use the system.

Database management could not be easier and can be controlled either locally or remotely. The terminal, which can be Wi-Fi or LAN enabled, can request a new database from a central location, allowing administrators to control data on the terminal for various sites from one location. Local updates are also possible with the use of a flash drive; just simply plug in and upload.

Key Benefits:

- Includes database management tools to utilise your existing product database.
- A variety of ways to select products based on user preference.
- Can be entirely tailored to your labelling needs.
- Product databases can be uploaded automatically via WiFi, LAN or Local.
- Easy media loading on the printer ensures trouble-free use.
- Fast throughput at 125mm per second – ideal for just-in-time product labelling requirements.

Features:

Screen Layout

● Smart Search Facility

The smart search facility allows you to enter as much or as little description of a product to query the database.

● Database Updater

The database can be updated via Wifi or Lan connections for instant availability, or through a local method on a USB stick .

● Label Select Facility

Ability to choose from a range of labels that have been pre-designed. This can be changed between prints .

● Easy Label Updater

Select-a-label allows labels to be stored on a USB stick, which then can be updated simply avoiding the need for hard-coding into the software.

● Auto Printer Selection

Select-a-label will automatically detect a new printer installed on the touch screen system and select it for printing.

● Label Print History

All previous printed labels are stored in a history CSV file, allowing analysis of print history and throughput.
